

<u>Strengths</u>		<u>Weaknesses</u>
Internal Origin	<ul style="list-style-type: none">- Product quite settled.- Very important group of stable and active developers.- Completely distributed.- Completely FLOSS.- Very active work on it.- Programming in Python and Perl, two well known and accessible language programming.- Multiplatform support.- Easy to use.- Support for remote access.- IDE plugins available.- Very good documentation.	<ul style="list-style-type: none">- Is not as known as Git.- The use is completely different in comparison with the conventional centralized SCMs.
<u>Opportunities</u>		<u>Threats</u>
External Origin	<ul style="list-style-type: none">- A very big community around it.- Very important investors behind it.- Is used by very important projects and forges.- There are very important business behind SCMs like this.	<ul style="list-style-type: none">- If the main developers fail or let the project, it could be seriously damaged.- Is FLOSS, so for many people this is not a guarantee.- It needs money from external investors, if they stop Investing then the project could be seriously damaged.- Three very important FLOSS competitors and other Privatives.- Maybe it's under the shadow of Git.
